

SabiHR - User Stories & Use Cases (All Modules)

Overview

This document covers user stories for all built admin modules in SabiHR. Each story describes **what the user sees, what data is required**, and **what actions they can perform** — written to guide backend API development.

Modules Covered:

- 1. Admin Dashboard
- 2. Attendance Management
- 3. Leave Management
- 4. Employee Management
- 5. Department Management
- 6. Payroll Management
- 7. Payroll Configuration
- 8. Statutory Compliance

1. Admin Dashboard (/dashboard)

US-1: View Dashboard Overview

As a company admin, I want to see a summary of key HR metrics, attendance, recent activity, and alerts on one screen, So that I can monitor the health of my organization at a glance.

Data the User Sees

Greeting:

- Admin's name (from logged-in user profile)
- Current date

KPI Cards (4):

Metric	Example Value	Comparison
Total Employees	156	+5.2% vs last month
Payroll Cost	₦45.2M	+2.1% vs last month
Attendance Rate	94.2%	+1.3% vs last month
Turnover Rate	3.1%	-0.8% vs last month

Today's Attendance Summary:

Status	Count	Percentage
Present	128	82.1%
Late	12	7.7%

Absent	8	5.1%
On Leave	8	5.1%

Recent Activity Feed (latest 6): Each activity contains: `type` , `employee name` , `description` , `timestamp`

Activity types: `new_hire` , `leave_approved` , `leave_requested` , `payroll_processed` , `document_generated` , `probation_ending` , `employee_exit`

Alerts (actionable): Each alert contains: `severity` (info | warning | urgent), `title` , `description`

Examples: probation reviews due, payroll deadline approaching, low leave balances, pension remittance overdue

User Actions

- Dismiss individual alerts
- Dismiss the account setup section
- Complete admin profile (first name, last name, phone)
- Set account password (with strength validation)

Backend API Needs

- `GET /dashboard/kpi` — returns KPI metrics with month-over-month change
- `GET /dashboard/attendance-summary` — today's attendance counts by status
- `GET /dashboard/recent-activity` — latest activity feed (paginated)
- `GET /dashboard/alerts` — active alerts for the admin
- `PATCH /dashboard/alerts/:id/dismiss` — dismiss an alert
- `PUT /admin/profile` — update admin profile (first name, last name, phone)
- `PUT /admin/password` — set/change password

2. Attendance Management (`/attendance`)

US-2: View and Manage Daily Attendance

As a company admin, **I want to** view, search, and filter employee attendance records by date, **So that** I can track who is present, late, or absent and export reports.

Data the User Sees

Summary Cards:

Metric	Description
Total	Total employees expected
Present	Employees clocked in on time
Late	Employees who clocked in after expected time
Absent	Employees who did not clock in

On Leave	Employees on approved leave
----------	-----------------------------

Attendance Rate: Percentage bar showing present + late + half-day vs total

Attendance Table (per day):

Column	Data
Employee	Name, avatar initials, employee ID
Department	Department name
Clock In	Time (e.g. "08:45 AM") or "—" if absent
Clock Out	Time (e.g. "05:30 PM") or "—"
Hours Worked	Decimal hours (e.g. "8.5h") or "—"
Status	present, late, absent, on-leave, half-day
Location	Office location (e.g. "Lagos Office")

User Actions

- Navigate between dates (previous/next day, date picker)
- Search by employee name or department
- Filter by status (present, late, absent, on-leave, half-day)
- Filter by department
- Export attendance report

Backend API Needs

- GET /attendance?date=YYYY-MM-DD — returns all attendance records for a date
- GET /attendance/summary?date=YYYY-MM-DD — returns count by status for a date
- GET /attendance/export?date=YYYY-MM-DD&format=csv — export attendance data

Data Model: AttendanceRecord

```
{
  id: string
  employeeId: string
  employeeName: string
  department: string
  date: string // "YYYY-MM-DD"
  clockIn: string | null // "HH:MM AM/PM"
  clockOut: string | null
  status: "present" | "late" | "absent" | "on-leave" | "half-day"
  hoursWorked: number | null
  location: string
}
```

3. Leave Management (/leave)

US-3: View and Manage Leave Requests

As a company admin, I want to view all leave requests, filter by status, and approve or reject pending requests, So that I can manage employee time-off efficiently and maintain adequate staffing.

Data the User Sees

Leave Policy Summary (6 types):

Leave Type	Annual Allocation
Annual Leave	20 days
Sick Leave	10 days
Casual Leave	5 days
Maternity Leave	90 days
Paternity Leave	10 days
Compassionate Leave	5 days

Leave Requests Table:

Column	Data
Employee	Name, department
Leave Type	annual, sick, casual, maternity, paternity, compassionate
Duration	Start date → End date
Days	Number of days requested
Applied On	Date the request was submitted
Status	pending, approved, rejected, cancelled
Approved By	Manager name (for non-pending)
Actions	Approve / Reject buttons (for pending only)

User Actions

- Filter by status tab (All, Pending, Approved, Rejected) with counts
- Search by employee name or department
- Filter by leave type
- Filter by department
- Approve a pending leave request
- Reject a pending leave request

Backend API Needs

- GET /leave/policy — returns leave types and annual allocations
- GET /leave/requests?status=&type=&department= — filtered leave requests
- GET /leave/requests/counts — count per status (for tab badges)
- PATCH /leave/requests/:id/approve — approve a request
- PATCH /leave/requests/:id/reject — reject a request

Data Model: LeaveRequest

```
{
  id: string
  employeeId: string
  employeeName: string
  department: string
  leaveType: "annual" | "sick" | "casual" | "maternity" | "paternity" |
"compassionate"
  startDate: string
  endDate: string
  days: number
  status: "pending" | "approved" | "rejected" | "cancelled"
  reason: string
  appliedOn: string
  approvedBy: string | null
}
```

4. Employee Management (/employees)

US-4: View and Manage Employees

As a company admin, I want to view all employees with summary stats, search, filter, and navigate to individual profiles, So that I can manage the workforce and find employee information quickly.

Data the User Sees

Summary Cards:

Metric	Description
Total Employees	Count of all employees
Active	Count where status = active
On Leave	Count where status = on-leave
Terminated	Count where status = terminated

Employee Table:

Column	Data
--------	------

Employee	Photo, full name, employee ID
Email	Work email
Job Title	Current role
Department	Department name
Employment Type	full-time, part-time, contract, intern
Status	active, inactive, on-leave, suspended, terminated
Start Date	Date joined
Location	Office location
Supervisor	Direct manager name

User Actions

- Filter by status tab (All, Active, On Leave, Suspended, Terminated) with counts
- Search by name, email, job title, employee ID, or department
- Filter by department, employment type, location
- Click "Add Employee" to create new employee
- Export employee list
- Click employee row to view profile (`/employees/:id`)

Backend API Needs

- GET `/employees?status=&department=&type=&location=&search=` — filtered list
- GET `/employees/counts` — count per status
- GET `/employees/:id` — single employee detail
- GET `/employees/export?format=csv` — export

US-5: Create New Employee

As a company admin, I want to add a new employee through a step-by-step form, So that I can onboard new hires into the system with all required information.

Form Steps

Step 1 — Personal Information:

Field	Type	Required
First Name	text	Yes
Last Name	text	Yes
Middle Name	text	No
Email	email	Yes
Phone	text	Yes

Date of Birth	date	No
Gender	select (male, female, other, prefer-not-to-say)	No
Marital Status	select (single, married, divorced, widowed)	No

Step 2 — Contact Details:

Field	Type	Required
Address	text	No
City	text	No
State	select (Nigerian states)	No
Country	text	No
Emergency Contact Name	text	No
Emergency Contact Phone	text	No
Emergency Contact Relationship	text	No

Step 3 — Employment Information:

Field	Type	Required
Employee ID	text	Yes (auto-generated)
Job Title	text	Yes
Department	select (from departments)	Yes
Employment Type	select (full-time, part-time, contract, intern)	Yes
Start Date	date	Yes
Supervisor	select (from employees)	No
Location	text	No
Basic Salary	number	No

Step 4 — Review & Submit:

- Shows all entered data for confirmation before submission

User Actions

- Navigate between steps (next/back)
- Save draft (persists to localStorage)
- Submit final employee record

Backend API Needs

- POST /employees — create new employee
- GET /departments — for department dropdown

- GET /employees?role=supervisor — for supervisor dropdown

Data Model: Employee

```
{
  id: string
  employeeId: string
  firstName: string
  lastName: string
  middleName?: string
  email: string
  phone: string
  dateOfBirth?: string
  gender?: "male" | "female" | "other" | "prefer-not-to-say"
  maritalStatus?: "single" | "married" | "divorced" | "widowed"
  address?: string
  city?: string
  state?: string
  country?: string
  jobTitle: string
  department: string
  employmentType: "full-time" | "part-time" | "contract" | "intern"
  employmentStatus: "active" | "inactive" | "on-leave" | "suspended" | "terminated"
  startDate: string
  supervisor?: string
  location?: string
  basicSalary?: number
  photo?: string
  emergencyContacts?: { name: string; phone: string; relationship: string }[]
}
```

5. Department Management (/departments)

US-6: View and Manage Departments

As a company admin, I want to view all departments with employee counts and budgets, So that I can manage organizational structure and resource allocation.

Data the User Sees

Summary Cards:

Metric	Description
Total Departments	Count of all departments
Total Employees	Sum of employees across all departments
Total Budget	Sum of all department budgets (¥)

Active Locations	Count of distinct office locations
------------------	------------------------------------

Department List/Grid:

Field	Data
Department Name	Name
Department Code	Short code (e.g. "ENG")
Head	Department head name
Employee Count	Number of employees
Budget	Annual budget (₺)
Location	Office location
Status	active, inactive

User Actions

- Search departments by name
- Toggle between grid view and table view
- Click department to view filtered employee list
- Click "Create Department" to add new department
- Open "Reassign Employees" modal to move employees between departments

US-7: Create New Department

As a company admin, I want to create a new department with a name, code, head, and budget, So that I can expand the organizational structure.

Form Fields

Field	Type	Required	Validation
Department Name	text	Yes	Non-empty
Department Code	text	Yes	Auto-uppercased
Department Head	select (from employees)	No	—
Description	textarea	No	—
Location	text	No	—
Budget	number	No	Numeric only
Status	select (active, inactive)	Yes	Default: active

Backend API Needs

- GET /departments — list all departments
- GET /departments/:id — single department detail

- `POST /departments` — create new department
 - `PUT /departments/:id` — update department
 - `DELETE /departments/:id` — delete department
-

US-8: Reassign Employees Between Departments

As a company admin, I want to move one or more employees from one department to another, So that I can handle restructuring and team changes.

User Actions

- Select target department from dropdown
- Select employees via checkboxes (with "select all" option)
- Confirm reassignment
- See success confirmation

Backend API Needs

- `PATCH /employees/bulk-reassign` — body: `{ employeeIds: string[], targetDepartmentId: string }`

Data Model: Department

```
{
  id: string
  name: string
  code: string
  head?: string
  headName?: string
  description?: string
  location?: string
  budget?: number
  employeeCount: number
  status: "active" | "inactive"
  createdAt: string
}
```

6. Payroll Management (/payroll)

US-9: View and Process Payroll Runs

As a payroll administrator, I want to view payroll run history, see summary totals, and process current payroll, So that I can ensure employees are paid accurately and on time.

Data the User Sees

Summary Cards:

Metric	Description
--------	-------------

Last Gross Pay	Total gross from last completed run
Last Net Pay	Total net from last completed run
Total Deductions	Total deductions from last completed run
Employees Paid	Headcount from last completed run

Payroll Runs Table:

Column	Data
Period	Month + Year (e.g. "March 2026")
Status	draft, processing, completed, failed
Gross Pay	Total gross amount (₦)
Deductions	Total deductions (₦)
Net Pay	Total net amount (₦)
Employees	Number of employees in run
Processed Date	Date completed (or "—")
Approved By	Approver name (or "—")

Payroll Tabs (8 views):

1. **Payroll Runs** — list of all runs
2. **Payslips** — individual employee payslips for a run
3. **Input Review** — verify salary inputs before processing
4. **Computation** — view calculated breakdowns
5. **Approval** — approve/reject payroll before disbursement
6. **Off-Cycle** — bonus and ad-hoc payment runs
7. **Adjustments** — retroactive salary corrections
8. **Auto-Payroll** — configure automatic monthly processing

User Actions

- View all payroll runs with status
- Process current draft payroll run
- View individual payslips per run
- Search payslips by employee name
- Approve or reject a payroll run
- Export payroll data
- Configure auto-payroll settings

Backend API Needs

- GET /payroll/runs — list all payroll runs
- GET /payroll/runs/:id — single run detail
- POST /payroll/runs — create new payroll run
- PATCH /payroll/runs/:id/process — process a draft run
- PATCH /payroll/runs/:id/approve — approve a run

- PATCH /payroll/runs/:id/reject — reject a run
- GET /payroll/runs/:id/payslips?search= — payslips for a run
- GET /payroll/runs/:id/summary — summary totals for a run
- GET /payroll/export/:runId?format=csv — export run data
- POST /payroll/off-cycle — create off-cycle run
- POST /payroll/adjustments — create adjustment
- PUT /payroll/auto-config — update auto-payroll settings

Data Model: PayrollRun

```
{
  id: string
  period: string          // "March 2026"
  month: number
  year: number
  status: "draft" | "processing" | "completed" | "failed"
  totalGross: number
  totalNet: number
  totalDeductions: number
  employeeCount: number
  processedDate: string | null
  approvedBy: string | null
}
```

Data Model: EmployeePayslip

```
{
  id: string
  payrollRunId: string
  employeeId: string
  employeeName: string
  department: string
  basicSalary: number
  housingAllowance: number
  transportAllowance: number
  otherAllowances: number
  grossPay: number
  tax: number
  pension: number
  otherDeductions: number
  totalDeductions: number
  netPay: number
  status: "pending" | "paid" | "on-hold"
  bankName: string
  accountNumber: string
}
```

7. Payroll Configuration (/payroll/config)

US-10: Manage Pay Grades and Salary Structures

As a payroll administrator, I want to define pay grades, salary structures, and allowance templates, So that employee compensation is standardized and consistent.

Data the User Sees

Tabs:

- 1. **Pay Grades** — salary bands by level
- 2. **Salary Structures** — component breakdowns
- 3. **Allowances & Deductions** — reusable templates
- 4. **Payroll Calendar** — processing schedule
- 5. **Assignments** — employee-to-grade mapping

Pay Grades Table:

Column	Data
Grade Name	e.g. "Grade 1 — Entry Level"
Level	Numeric level (1-7)
Min Salary	Floor amount (₦)
Mid Salary	Midpoint amount (₦)
Max Salary	Ceiling amount (₦)
Employees	Count assigned to this grade
Status	active, inactive

Salary Structures Table:

Column	Data
Structure Name	e.g. "Standard Nigerian"
Components	List of salary components
Employee Count	How many employees use it
Status	active, inactive

Salary Components:

- Basic Salary (percentage of gross, e.g. 40%)
- Housing Allowance (e.g. 20%)
- Transport Allowance (e.g. 15%)
- Meal Allowance (e.g. 10%)
- Utility Allowance (e.g. 5%)

- Other components as configured

Allowance/Deduction Templates:

Field	Data
Name	Template name
Type	allowance or deduction
Category	statutory, voluntary, benefit
Calculation	fixed amount or percentage
Amount/Rate	₦ value or %
Taxable	yes/no

User Actions

- View, create, edit, deactivate pay grades
- View, create, edit salary structures with component breakdowns
- View, create, edit allowance/deduction templates
- View payroll calendar with processing dates
- Assign employees to pay grades

Backend API Needs

- GET /payroll/pay-grades — list pay grades
- POST /payroll/pay-grades — create grade
- PUT /payroll/pay-grades/:id — update grade
- GET /payroll/salary-structures — list structures
- POST /payroll/salary-structures — create structure
- PUT /payroll/salary-structures/:id — update structure
- GET /payroll/templates — list allowance/deduction templates
- POST /payroll/templates — create template
- GET /payroll/calendar — payroll processing schedule
- GET /payroll/assignments — employee-to-grade assignments
- PUT /payroll/assignments/:employeeId — assign grade to employee

8. Statutory Compliance (/payroll/compliance)

US-11: View and Manage Statutory Compliance

As a payroll administrator, I want to view tax configurations, pension settings, and statutory body registrations, So that I can ensure the company complies with Nigerian labor and tax regulations.

Data the User Sees

Tabs:

1. **PAYE Tax** — tax band configuration
2. **Pension** — PFA and contribution rates

3. **NHF / ITF / NSITF / NHIS** — statutory body details

4. **Compliance Overview** — payment tracking and status

PAYE Tax Configuration:

Tax Band	Income Range (₦)	Rate
First Band	0 – 100,000	0%
Second Band	100,001 – 500,000	5%
Third Band	500,001 – 1,000,000	10%
Fourth Band	1,000,001 – 2,000,000	15%
Fifth Band	2,000,001 – 3,200,000	20%
Above	3,200,001+	24%

Plus: Consolidated Relief Allowance (CRA), Gross Income relief percentage

Pension Configuration:

Field	Value
Employee Contribution Rate	8%
Employer Contribution Rate	10%
PFA's Configured	List of Pension Fund Administrators

Statutory Bodies:

Body	Full Name	Rate/Amount
NHF	National Housing Fund	2.5% of basic salary
ITF	Industrial Training Fund	1% of annual payroll
NSITF	National Social Insurance Trust Fund	1% of monthly payroll
NHIS	National Health Insurance Scheme	Employer 10%, Employee 5%

Compliance Overview:

- Payment status per statutory body per month
- Due dates and remittance tracking
- Overdue/pending/completed status

User Actions

- View all tax band configurations
- View pension PFA details and contribution rates
- View statutory body registration details
- Track compliance payment status per month
- See overdue remittances

Backend API Needs

- GET /compliance/payee — tax bands and CRA config
- PUT /compliance/payee — update tax configuration
- GET /compliance/pension — pension config and PFA list
- PUT /compliance/pension — update pension config
- GET /compliance/statutory-bodies — NHF, ITF, NSITF, NHIS details
- GET /compliance/overview — payment status tracking by month
- POST /compliance/remittance — record a remittance payment

Complete Route Map

/dashboard	→ Admin Dashboard (US-1)
/attendance	→ Attendance Management (US-2)
/leave	→ Leave Management (US-3)
/employees	→ Employee List (US-4)
/employees/create	→ Create Employee (US-5)
/employees/:id	→ Employee Detail
/departments	→ Department List (US-6)
/departments/create	→ Create Department (US-7)
/payroll	→ Payroll Management (US-9)
/payroll/config	→ Payroll Configuration (US-10)
/payroll/compliance	→ Statutory Compliance (US-11)

Summary of Backend API Endpoints

Module	Endpoints
Dashboard	7 endpoints (KPI, attendance summary, activity, alerts, profile, password)
Attendance	3 endpoints (records by date, summary, export)
Leave	5 endpoints (policy, requests, counts, approve, reject)
Employees	5 endpoints (list, detail, create, export, counts)
Departments	5 endpoints (list, detail, create, update, delete) + bulk reassign
Payroll	12 endpoints (runs, payslips, process, approve, off-cycle, adjustments, auto-config)
Payroll Config	9 endpoints (grades, structures, templates, calendar, assignments)
Compliance	7 endpoints (PAYE, pension, statutory bodies, overview, remittance)

Total: ~53 API endpoints
